## Mobile Repair Technician

### Description

### Description

Telecommunications equipment installation and cable television service technicians install, test, maintain and repair cable and satellite television, internet signal and associate equipment, telephones, telephone switching equipment and other telecommunications equipment related to transmission and processing of voice, video signals and other data over a variety of media including fibre optics, microwave, radio and satellite. They are employed by cable and satellite television, telephone and other telecommunications transmission service companies. Apprentices are also included in this unit group.

### Responsibilities

### Job duties

Here are some of the main activities and tasks that Telecommunications equipment installation and cable television service technicians have to perform, and some of the physical demands they involve:

- Telephone installers and repairers
- Install, arrange, remove and maintain telephone equipment, wiring and associated hardware
- Test installed telephone systems to locate transmission faults
- Repair or replace defective and damaged telephones, wire and associated equipment.
- Switch network installers and repairers
- Install electromechanical, analog and digital trunking systems, circuits and equipment in telecommunications central offices and switching centres
- Inspect and test trunking systems, circuits and equipment
- Analyze test results and adjust, change or repair switching system, network, associated equipment and software.
- Updating this Main Duty
- Operate computerized testing systems to conduct service tests on customer lines and equipment
- Determine the nature, cause and location of service trouble
- Dispatch appropriate repair personnel
- Complete test reports and maintain test and service records
- May assist repair personnel to test lines, circuits and systems, isolate and clear cable faults and verify records.
- Telecommunications equipment technicians
- Install, remove and maintain various telecommunications equipment and related systems such as telex and facsimile machines, teletypewriters, mobile radios, cellular telephones, pagers and other telecommunications equipment
- Configure operating systems and install software for access to the Internet
- Inspect and test operation of telecommunications equipment
- Diagnose and locate equipment faults, and adjust, replace or repair

## **Qualifications**

## **Employment requirements**

This is what you typically need for the job.

- Completion of secondary school is required.
- Telephone and switch network installers and repairers require completion of an apprenticeship program ranging from three to four years or a combination of over three years work experience in the trade and some high school, college or industry related courses.
- Cable television service technicians require completion of a college program in electronics or a combination of college, correspondence or industry courses related to electronics and electrical systems and on-the-job training or completion of a four-year cable television technician apprenticeship program.
- Telecommunications equipment technicians usually require completion of a college electrical and electronics program and several months of on-the-job training or completion of a three- or four-year apprenticeship training program.
- Trade certification for communication technicians is available, but voluntary, in Nova Scotia, Alberta, British Columbia, the Northwest Territories and Nunavut.
- Experience as an installer and repairer (telephone and switch network) is usually required for service testers.
